

Developing Variable Rate Prescriptions

A workshop sponsored by the
Kansas Agricultural Research Association

With the increased popularity of guidance systems, rate controllers, and yield monitors, many crop producers are curious about developing their own variable rate prescriptions. This workshop will address the issue of developing site-specific prescriptions for variable rate application of inputs. Industry leaders and experts in the use of precision agriculture technologies will conduct the workshop. The Kansas Agricultural Research Association is committed to providing its membership with educational programs and the opportunity to interact with experts to further its mission of promoting on-farm research.

Workshop Agenda:

- 10:00 Welcome and Introductions
- 10:15 Using On-Farm Research to Determine Crop Response to Inputs
- 12:00 Lunch
- 1:00 Implementing and Evaluating a Site-Specific Prescription
- 3:00 Closing Comments

Registration:

\$25 registration fee includes lunch and workshop materials
